

You could be damaging your neck with every glance at your phone! Looking down strains your neck joints—a lot more than you think. Your head weighs 10-12 pounds when upright. But every 15° of bend, it adds more weight: 27 pounds at 15°, 40 at 30°, and 60 pounds at 60°—the limit for most necks. We see teens with this bent-neck posture all too often-just look at the bus stop in the morning-contributing to painful strain. Instead, hold your phone up and look down with just your eyes, not your neck! If you need to hold it longer, consider a supportive surface or phone stand to reduce strain. Be kind to your spine and choose better posture—your neck will thank you!

Scrolling could be overloading your neck—one text at a time!

Your head weighs just 10–12 lbs in a neutral position, but tilt it forward 15° and it feels like 27 lbs. At 30°, that load jumps to 40 lbs, and at a 60° tilt, your neck is burdened with 60 lbs. Think about teens at the bus stop, hunched over their phones—ouch! The fix is simple: hold your phone at eye level and scroll with your eyes, not your neck. For extra relief, rest your forearm on a supportive surface or use a phone holder. Treat your neck like a prized asset—swap that "sack of stones" for a bouquet of helium balloons. **Good posture isn't just stylish; it's key to a pain-free neck!**

10 Sneaky Ways to Build Balance & Strength

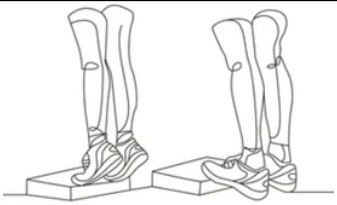

No extra gym time needed—just weave these moves into your daily routine for better strength, stability, and longevity!

1. Brush & Balance

Stand on one foot while brushing your teeth.
Alternate legs or split time evenly.
Always be ready to tap down if needed.

2. Calf Raises at the Counter

Waiting for your tea or coffee?
Do slow calf raises on a step or flat ground.

3. Bathroom Wall Sits

After washing your hands, do a 30-second wall sit.
Great for quads, glutes, and endurance.
